

# Chemistry 12

## Unit IV Acids, Bases and Salts

### Prescribed Learning Outcomes

The following grid contains all the prescribed learning outcomes (2007 / 2008) for the Acid / Base unit of Chemistry 12. Use this in conjunction with the Acid / Base Study Guide to determine your level of competence and understanding of each learning outcome. Once you are confident that you completely understand each learning outcome, place a check mark in the square provided.

**Please Note: The Chemistry 12 Study Guides are based on the OLD PLO's. Use the "Study Guide Equivalent" column to match up the old PLO's to the new ones.**

Prescribed Learning Outcomes	Achievement Indicators	Study Guide Equivalent	Status
<b>D1</b> identify acids and bases through experimentation	List general properties of acids and bases	J2	<input type="checkbox"/>
	Write the names and formulae of some common household acids and bases	J5	<input type="checkbox"/>
	Write balanced equations representing the neutralization of acids by bases in solution	J3	<input type="checkbox"/>
	Outline some of the uses and commercial names of common household acids and bases	J5	<input type="checkbox"/>
<b>D2</b> identify various models for representing acids and bases	Define Arrhenius acids and bases	J4	<input type="checkbox"/>
	Define Bronsted-Lowry acids and bases	J6	<input type="checkbox"/>
<b>D3</b> analyse balancing equations representing the reaction of acids or bases with water	Identify Bronsted-Lowry acids and bases in an equilibrium	J7	<input type="checkbox"/>
	Define conjugate acid-base pair	J10	<input type="checkbox"/>
	Identify the conjugate of a given acid or base	J11	<input type="checkbox"/>
	Show that in any Bronsted-Lowry acid-base equation there are two conjugate pairs present	J12	<input type="checkbox"/>
	Identify an $\text{H}_3\text{O}^+$ ions as a protonated $\text{H}_2\text{O}$ molecule that can be represented in shortened form as $\text{H}^+$	J9	<input type="checkbox"/>
<b>D4</b> classify an acid or base in solution as either weak or strong, with reference to its electrical conductivity	Relate electrical conductivity in a solution to the total concentration of ions in the solution	K1	<input type="checkbox"/>
	Define and give several examples for the following terms: - Strong acid - Strong Base - Weak Acid - Weak Base	K3, K4	<input type="checkbox"/>
	Write equations to show what happens when strong and weak acids and bases are dissolved in water.	K5	<input type="checkbox"/>
<b>D5</b> analyse the equilibria that exists in weak acid or weak base systems	Compare the relative strengths of acids or bases by using a table of relative acid strengths	K6	<input type="checkbox"/>
	Predict whether products or reactants are favoured in an acid-base equilibrium by comparing the strength of the two acids (or two bases)	K8	<input type="checkbox"/>
	Compare the relative concentration of $\text{H}_3\text{O}^+$ ( $\text{OH}^-$ ) between two acids (or between two bases) using their relative positions on an acid strength table	K9	<input type="checkbox"/>

Prescribed Learning Outcomes	Achievement Indicators	Study Guide Equivalent	Status
<b>D6</b> identify chemical species that are amphiprotic	Define amphiprotic	K10, K11	<input type="checkbox"/>
	Describe situations in which H <sub>2</sub> O would act as an acid or base	K12	<input type="checkbox"/>
<b>E1</b> analyse the equilibrium that exists in water	Write equations representing the ionization of water using either H <sub>3</sub> O <sup>+</sup> and OH <sup>-</sup> or H <sup>+</sup> and OH <sup>-</sup>	L1	<input type="checkbox"/>
	Predict the effect of the addition of an acid or base to the equilibrium system: $2\text{H}_2\text{O} \rightleftharpoons \text{H}_3\text{O}^+ + \text{OH}^-$	L3	<input type="checkbox"/>
	State the relative concentrations of H <sub>3</sub> O <sup>+</sup> and OH <sup>-</sup> in acid, base and neutral solutions	L4	<input type="checkbox"/>
	Write the equilibrium expression for the ion product constant of water (water ionization constant: K <sub>w</sub> )	L2	<input type="checkbox"/>
	State the value of K <sub>w</sub> at 25°C	L5	<input type="checkbox"/>
	Describe and explain the variation in the value of K <sub>w</sub> with temperature	L6	<input type="checkbox"/>
	Calculate the concentration of H <sub>3</sub> O <sup>+</sup> (OH <sup>-</sup> ) given the other, using K <sub>w</sub>	L7	<input type="checkbox"/>
<b>E2</b> perform calculations relating pH, pOH, [H <sub>3</sub> O <sup>+</sup> ], and [OH <sup>-</sup> ]	Define pH and pOH	L9	<input type="checkbox"/>
	Define pK <sub>w</sub> , give its value at 25°C, and its relation to pH and pOH	L10	<input type="checkbox"/>
	Calculate [H <sub>3</sub> O <sup>+</sup> ] or [OH <sup>-</sup> ] from pH and pOH	L11, L12	<input type="checkbox"/>
	Describe the pH scale with reference to everyday solutions	L8	<input type="checkbox"/>
<b>E3</b> explain the significance of the K <sub>a</sub> and K <sub>b</sub> equilibrium expressions	Write K <sub>a</sub> and K <sub>b</sub> equilibrium expressions for weak acids or weak bases	M1	<input type="checkbox"/>
	Relate the magnitude of K <sub>a</sub> (the acid ionization constant) or K <sub>b</sub> (the base ionization constant) to the strength of the acid or base	M2	<input type="checkbox"/>
<b>E4</b> perform calculations involving K <sub>a</sub> and K <sub>b</sub>	Given the K <sub>a</sub> , K <sub>b</sub> , and initial concentrations, calculate any of the following: - [H <sub>3</sub> O <sup>+</sup> ] - [OH <sup>-</sup> ] - pH - pOH	M3	<input type="checkbox"/>
	Calculate the value of K <sub>b</sub> for a base given the value of K <sub>a</sub> for its conjugate acid (or vice versa)	M4	<input type="checkbox"/>
	Calculate the value of K <sub>a</sub> or K <sub>b</sub> given the pH and initial concentration	M5	<input type="checkbox"/>
	Calculate the initial concentration of an acid or base, given the appropriate K <sub>a</sub> , K <sub>b</sub> , pH or pOH values.	N/A	<input type="checkbox"/>
<b>F1</b> demonstrate an ability to design, perform, and analyse a titration experiment involving the following: - Primary standards - Standardized solutions - Titration curves - Appropriate indicators	Write formulae, complete ionic equation and net ionic equations for: - A strong acid reacting with a strong base (neutralization) - A weak acid reacting with a strong base - A strong acid reacting with a weak base	P4	<input type="checkbox"/>
	Demonstrate proper titration technique when performing a titration experiment	N/A	<input type="checkbox"/>
	Explain the difference between the equivalence point (stoichiometric point) of a strong acid-strong base titration and the equivalence point of a titration involving a weak acid-strong base or strong acid-weak base	P6	<input type="checkbox"/>

Prescribed Learning Outcomes	Achievement Indicators	Study Guide Equivalent	Status
<b>F1</b> demonstrate an ability to design, perform, and analyse a titration experiment involving the following: - Primary standards - Standardized solutions - Titration curves - Appropriate indicators (Continued...)	Interpret titration curves plotted from experimental data	N/A	<input type="checkbox"/>
	Select indicators whose transition point coincides with the equivalence point of the titration reaction	N/A	<input type="checkbox"/>
	Calculate the concentration of an acid or base using titration data or similar data (e.g., grams or moles)	P2	<input type="checkbox"/>
	Calculate the volume of an acid or base of known molarity needed to completely react with a given amount of base or acid	P3	<input type="checkbox"/>
	Calculate the pH of a solution formed when a strong acid is mixed with a strong base	P5	<input type="checkbox"/>
<b>F2</b> describe an indicator as an equilibrium system	Describe an indicator as a mixture of a weak acid and its conjugate base, each with distinguishing colours	O1	<input type="checkbox"/>
	Describe the term transition point of an indicator, including the conditions that exist in the equilibrium system	O2	<input type="checkbox"/>
	Describe the shift in equilibrium and resulting colour changes as an acid or a base is added to an indicator	O3	<input type="checkbox"/>
<b>F3</b> perform and interpret calculations involving the pH in a solution and $K_a$ for an indicator	Predict the approximate pH at the transition point using the $K_a$ value of the indicator	O4	<input type="checkbox"/>
	Predict the approximate $K_a$ value of an indicator given the approximate pH range of the colour change	O5	<input type="checkbox"/>
	Match an indicator's colour in a solution with an approximate pH, using a table of indicators	N/A	<input type="checkbox"/>
<b>F4</b> describe the hydrolysis of ions in salt solution	Write a dissociation equation for a salt in water	N1	<input type="checkbox"/>
	Write the net ionic equations representing the hydrolysis of ions in solution	N2	<input type="checkbox"/>
<b>F5</b> analyse the extent of hydrolysis in salt solutions	Predict whether a salt solution would be acidic, basic, or neutral (compare $K_a$ and $K_b$ values, where necessary)	N3	<input type="checkbox"/>
	Determine whether an amphiprotic ion will act as a base or an acid in solution (compare $K_a$ and $K_b$ values, where necessary)	N4	<input type="checkbox"/>
	Calculate the pH of a salt solution from relevant data, assuming that the predominant hydrolysis reaction is the only reaction determining the pH	N/A	<input type="checkbox"/>
<b>F6</b> describe buffers as equilibrium systems	Describe the tendency of buffer solutions to resist changes in pH (i.e., able to buffer the addition of small amounts of strong acid or the addition of small amounts of strong base)	Q1	<input type="checkbox"/>
	Describe the composition of an acidic buffer and a basic buffer	Q2	<input type="checkbox"/>
	Describe qualitatively how the buffer equilibrium shifts as small quantities of acid or base are added to the buffer; the stress being the change in the concentration of the stronger acid ( $H_3O^+$ ) or base ( $OH^-$ )	Q5	<input type="checkbox"/>
	Describe in detail a common buffer system (e.g., the blood buffer system)	Q6	<input type="checkbox"/>
<b>F7</b> describe the preparation of buffer systems	Outline a procedure to prepare a buffer solution	Q3	<input type="checkbox"/>
	Identify the limitations in buffering action	Q4	<input type="checkbox"/>

Prescribed Learning Outcomes	Achievement Indicators	Study Guide Equivalent	Status
F8 predict what will happen when oxides dissolve in rain water	Write the equations representing the formation of acidic solutions or basic solutions from non-metal and metal oxides	R1	<input type="checkbox"/>
	Describe the pH conditions required for rain to be called acid rain (pH 5.0 and lower)	R2	<input type="checkbox"/>
	Relate the pH of normal rain water to the presence of dissolved CO <sub>2</sub> (approximately pH 5.6)	R3	<input type="checkbox"/>
	Describe sources of NO <sub>x</sub> (automobile engines) and SO <sub>x</sub> (fuels containing sulphur and smelters of sulphide ores)	R4	<input type="checkbox"/>
	Discuss general environmental problems associated with acid rain	R5	<input type="checkbox"/>
